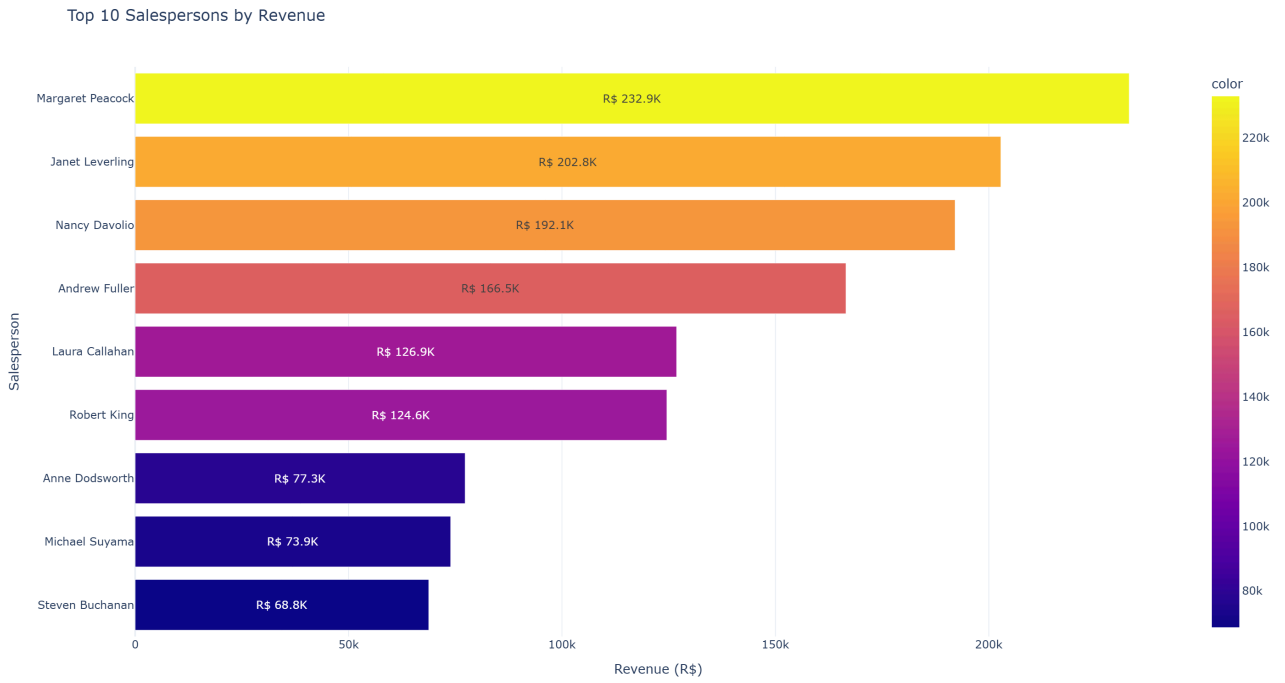
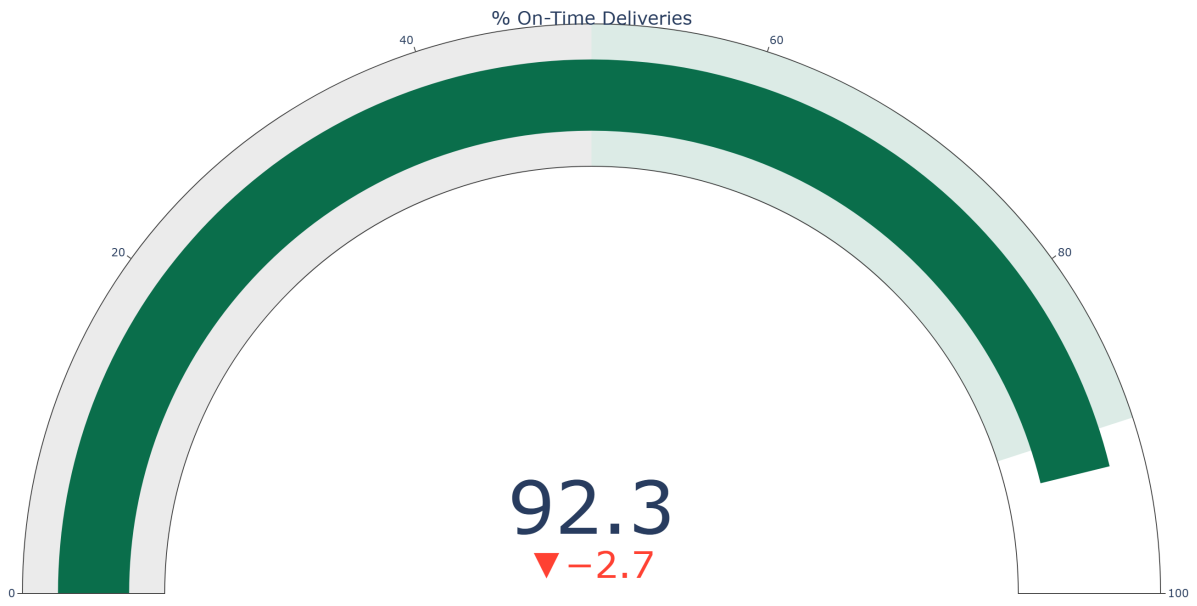
Margaret Peacock leads with R$ 232.9K.



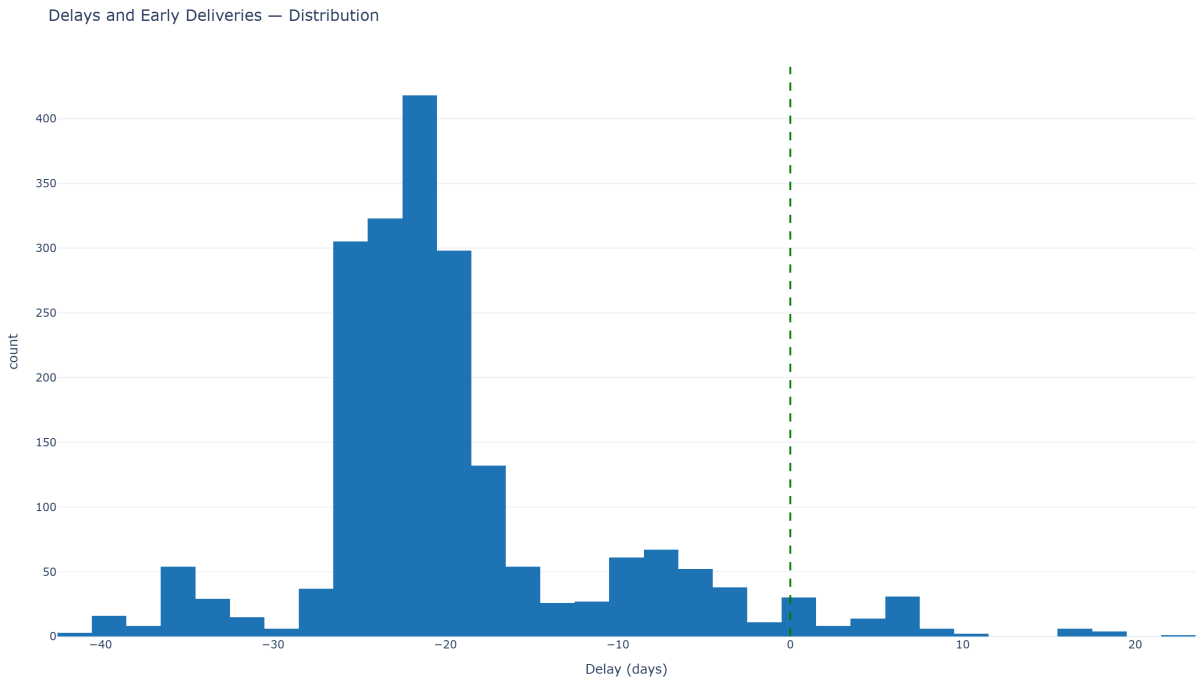
% On-Time Deliveries

Current level: 92.34% (target: 95%).



Delays and Early Deliveries

Avg early: -20.8d. Avg late: 6.2d.



Insights & Recommended Actions

Revenue & Product Mix

- Beverages accounts for 21.2% of net revenue. Consider diversifying the product portfolio to reduce concentration risk.
- Average discount is 5.4%. Analyse whether high-discount orders generate positive margin and adjust pricing strategy accordingly.
- Top product (Côte de Blaye) drives a disproportionate share of revenue — explore bundle promotions with adjacent SKUs to increase average basket size.

Customers & Churn

- 18.0% of the customer base has been inactive for over 90 days. Launch a re-engagement campaign with personalised offers for dormant accounts.
- Median inactivity is 23 days — set automated alerts at 60 days to intervene before churn occurs.
- Segment at-risk customers by revenue contribution and prioritise high-value accounts for direct sales outreach.

Logistics & Service Level

- On-time delivery rate is 92.3% (target: 95%). Below the 95% target — audit carrier performance and shipment processes to close the gap.
- Late orders average 6.2 days of delay — identify carriers and routes with the worst SLA performance and renegotiate contracts.
- Introduce a post-shipment satisfaction survey to correlate delay data with customer retention metrics.
